

## T1 mast set

### Setup

Mast sets come with this pedestal washer to protect the carbon fiber and improve the mast/wing connection. Do not use it without this washer.

The mast set includes this slot washer to protect the carbon fiber and improve the mast/wing connection. Screw forces are equally distributed over the entire slot length. Do not use it without this washer.

### Cautions:

1. Make sure you tighten the two M8 bolts attaching the wing to the mast using a decent amount of force. Before each new session check the bolts to make sure they are tight. This will ensure the mast and wing are rigid and ready to ride!
2. We designed a tight fit for the baseplate and mast. This means you need to carefully tighten the mast bolts to draw the mast into the base. It must seat fully before use.
